Member Technical Staff / Python Developer / Python Automation

Motivated Member Technical Staff and Python Developer with over 4 years of experience in building automation tools, optimizing system workflows, and delivering reliable backend solutions. Skilled in Python scripting, API integration, debugging, and cross-platform automation for improved efficiency and performance. Seeking to leverage strong problem-solving abilities, hands-on development expertise, and a passion for automation to contribute to high-impact engineering initiatives within a technology-driven organization.

Profile Summary

- **Python Development & Scripting:** Designing, coding, and optimizing Python-based tools, applications, and automation scripts to streamline engineering and operational workflows.
- **Automation Framework Design:** Building robust automation frameworks for system tasks, patching workflows, report generation, and application deployment to reduce manual effort and improve efficiency.
- **System & Application Integration:** Integrating Python solutions with APIs, databases, operating systems, and third-party tools to enable seamless data exchange and end-to-end process automation.
- **Debugging & Issue Resolution:** Analyzing logs, troubleshooting failures, and resolving system, application, and automation-related issues to ensure stable and reliable performance.
- **Database Querying & Backend Operations:** Querying SQL databases, extracting metadata, and performing backend analysis to support data-driven decision-making and tool enhancement.
- **CI/CD & Version Control Practices:** Utilizing Git, CI/CD pipelines, and collaborative development practices to support continuous integration, efficient code management, and high-quality software delivery.

~ Core Competencies ~

- | | | |
|--------------------------|-------------------------------|------------------------------|
| • Python Scripting | • Log Analysis | • Virtual Machine Management |
| • Automation Development | • Debugging & Troubleshooting | • Patch Automation |
| • REST API Integration | • Database Querying (MySQL) | • Workflow Automation |
| • Cross-Platform Support | • System Optimization | • Configuration Management |

IT Skills

- | | |
|---|---|
| • Programming Languages: Python, SQL Developer | • Frameworks / Libraries: TensorFlow, PyTorch MySQL, SQL querying, DBeaver |
| • Tools: Postman, Git, DBeaver, Pycharm, Xampp, VS Code, GitHub | • APIs: RESTful API integration & testing |
| • AI-Assisted Development: GitHub Copilot, Cursor | • Testing Expertise: Functional testing, automation testing, debugging |
| • Scripting & Automation: ChatGPT, Claude, Python scripting, RESTAPI integration | • Other Skills: Test planning, writing/executing test cases, API validation |
| • Machine Learning: Model development, training, evaluation, data preprocessing | • System Tools: Platforms: Event Viewer, Reliability Monitor Windows, Linux, macOS |

Professional Experience

ZOHO, Chennai, India | May 2022 – Present

Growth Path:

- **Member Technical Staff**, Aug 2026 – Present
- **Project Trainee**, May 2022 – Jul 2022
- **Associate Engineer**, Jul 2022 – Oct 2022

Key Deliverables:

As Member Technical Staff

- Develop automation tools and Python scripts to streamline patching workflows, eliminate manual intervention, and reduce processing time from hours to minutes.
- Build REST API-integrated solutions to track machine inventory, software installations, storage usage, and generate automated patch-testing reports in real time.
- Automate application analysis by creating scripts that detect silent install switches, remove unused software, manage background services, and optimize startup performance.
- Implement system-level automation for OS installation, virtual machine maintenance, system reboots, and resource monitoring to improve overall machine efficiency.
- Integrate backend logic by querying MySQL databases to retrieve patch metadata, analyze installation logs, and support post-installation debugging workflows.
- Diagnose and resolve complex system issues by debugging log files, identifying root causes, and reporting 25+ product server bugs during patch testing

As Project Trainee, ZOHO

- Develop automation tools and Python scripts to streamline patching workflows, eliminate manual intervention, and reduce processing time from hours to minutes.
- Build REST API-integrated solutions to track machine inventory, software installations, storage usage, and generate automated patch-testing reports in real time.
- Automate application analysis by creating scripts that detect silent install switches, remove unused software, manage background services, and optimize startup performance.
- Implement system-level automation for OS installation, virtual machine maintenance, system reboots, and resource monitoring to improve overall machine efficiency.
- Integrate backend logic by querying MySQL databases to retrieve patch metadata, analyze installation logs, and support post-installation debugging workflows.
- Diagnose and resolve complex system issues by debugging log files, identifying root causes, and reporting 25+ product server bugs during patch testing

Education

- **Bachelor of Science - Physics with CA**, Madras University, Chennai, India (Jun 2022)

Certifications

- **CORE PYTHON**: Diploma in Programming Language

Personal Details

- **Date of Birth**: 21 May 2002
- **Nationality**: Indian
- **Languages Known**: English, Hindi and Tamil
- **Passport Details**: AH452846 valid till Sep 2035
- **Address** : 2/18, Perumal Kovil Streat, Melaiyur, Chengalpattu - 603108
